It is great pleasure and privilege that we, the Delta Group, are able to bring to you this short instructional course on knee arthroplasty. The Delta Group was founded 10 years ago in response to frequent requests from overseas surgeons to visit our hospital and to join our fellowship program. The aim of the Delta Group is to foster fellowship amongst arthroplasty surgeons of Asia and to promote knowledge and practice of hip and knee arthroplasty in the Asia-Pacific region. More than 1500 Asian surgeons have attended educational meetings conducted by the Delta Group in Sydney and various parts of Asia. Over 600 surgeons attended short term fellowships with us and many of them have maintained close and ongoing association with the group.

The Delta Group comprises of specialist arthroplasty surgeons from the Nepean Private Hospital, St. Vincent's Private Hospital and the Seven days Adventist Hospital in Sydney, Australia. Members of the Delta Group are,

- Wui K. Chung
- Simon Coffey
- Michael Neil
- Rami Sorial
- Jim Sullivan

It is our special pleasure to have a distinguished guest with us for this course, Professor Young Wan Moon of Samsung Medical Center, Dept. of Orthopaedic Surgery, Kangnam-Gu, Seoul, Korea. He is a highly regarded arthroplasty surgeon who has generously dedicated time and effort at sharing his knowledge and experience.

(Dr. W K Chung)

Course Overview

Dear Colleague,

I am happy that Delta group has chosen Delhi as venue for its prestigious course on Primary TKA. An increasing number of surgeons are interested in knee and hip arthroplasty today. The need of the hour is to be safe in our work. Therefore the topic of the present course is apt **"Techniques for High Performance TKA - Achieving a satisfying outcome"**. I extend my warm welcome to you all to attend this special event at Indraprastha Apollo Hospital, New Delhi on December 3, 2006.

TKA is viewed generally as a highly rewarding, successful and lasting operation, but up to 10% of primary TKA fail prematurely and about 75% of failures are due to technical errors. Patients present late for primary TKA, thus they suffer with severe deformities requiring more complex and skilled surgeries, increasing our challenges multifold.

This course will be a highly interactive and intensive one day event. We will be demonstrating three simultaneous live surgeries in one day with detailed discussions about each procedure, covering the subject widely. Course will also feature high intensity problem case discussions and critical presentations on vital topics.

We intend to adhere to the time schedule, **kindly make it convenient to be on time.**

(Dr. Rajeev K Sharma)
